SENSA

Summary Agent
Understand case context in seconds

Challenge

Manually gathering data from siloed systems just to understand alert context is time-consuming, prone to human error, and delays risk assessments. As alert volumes increase, compliance teams must find a scalable solution that enables investigators to process alerts faster and more effectively.

Solution

Sensa Summary Agent automatically aggregates and summarises data from across disparate systems to present investigators with a context-rich overview of their investigation. Trained on your policies and procedures, it seamlessly integrates into existing workflows to immediately enhance investigator understanding of an alert, powering faster, more confident decision-making.

Surface insight with intelligent automation

Accelerate investigation triage

Save investigators hours of manual effort by automatically centralising and summarising KYC data, account details, subject history, and any other relevant sources into one clear, comprehensive investigation summary.
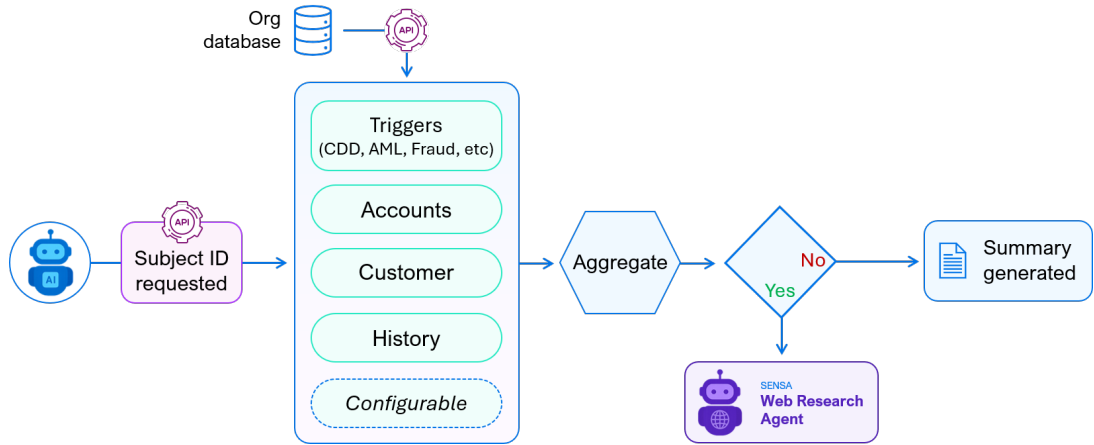

Enhance with external data sources

Enrich summaries further by connecting Sensa Summary Agent to third-party data sources that provide a clearer picture of the subject or entity under investigation. You can even connect to Sensa Web Research Agent to provide in-depth background checks within your summaries.

Empower faster decision-making

With comprehensive alert context, investigators can act faster, make more confident decisions and focus on assessing genuine risk signals.

Process flow

Personalized to suit your exact needs

Sensa Agents are pre-trained on compliance-specific tasks and tailored with your policies and procedures to ensure adherence to established processes.

Easily integrate into existing systems

Designed to easily integrate into third-party systems, Sensa Agents use open API architecture to seamlessly connect with diverse platforms.

Robust model governance

Transparency and auditability are built-in to Sensa Agents, ensuring regulatory compliance is never compromised.

Quickly scale when ready

Sensa Agents are designed to work with each other to optimize workflow automation. Add more Sensa Agents as you build trust in their performance.
