

Foundational AI strategy:

AI-driven operational excellence

SymphonyAI can help your business take full advantage of AI's potential with [IRIS Foundry, an industrial DataOps platform](#) with prebuilt applications that solve maintenance, optimization, and worker efficiency challenges.

Our Predictive Asset Intelligence application is an advanced, composable solution that increases plant performance by limiting unplanned downtime.

1 Real-time AI analysis

Use the power of layered analytics by combining anomaly detection, apparent causes, and recommendations.

2 Advanced early warning system

Get early detection of potential issues and timely warnings that will impact production.

3 Reduce operational costs

Avoid costly downtime and emergency repairs that result from traditional reactive maintenance practices. Maximize uptime with automated early warnings using AI and physics analysis, identifying issues in advance.

4 Eliminate knowledge silos

Consolidate and contextualize data sources at the site and enterprise level ensuring visibility across the enterprise to make informed decisions.

5 Impact KPIs

Improve plant operations with deep learning that offers set point advisories based on desired outcomes that adapt to real-time conditions. Lower energy costs, increase yield, and decrease scrap to improve overall performance.

IRIS Foundry's AI-driven applications enable predictive maintenance, optimize processes, and boost frontline worker efficiency.

Take the first steps:

Here are some steps you can take TODAY to start you on the path toward AI transformation.

Establish an AI council of senior stakeholders who can lead your organization by example.

Develop responsible AI policies that prioritize compliance, security, privacy, and transparency.

Allocate budget to reinforce data infrastructures, expand digital bandwidth, and deploy new technology.

Identify proven value drivers, like predictive maintenance and performance optimization, to provide tangible ROI.

Identify AI-powered applications that enhance productivity across your organization and develop AI solutions that align to your specific business objectives.

As Microsoft Partner of the Year for Innovation, we're uniquely positioned to help you navigate the emerging AI landscape.

[Reach out today](#) for guidance on how AI-driven operations can impact your plant performance.
